

Mailserver Configuration

Courier is a mail server capable of handling the IMAP and POP3 protocols. This interface allows you to configure various aspects of Courier's behavior.

Protocols Enabled

☒ IMAPD ☒ IMAPDSSL ☒ POP3D ☒ POP3DSSL

These checkboxes select which protocols Courier will listen on.

Note: cPanel's Webmail system requires IMAP in order to function.

Note: If you select no checkboxes, the system will remove the Mailserver RPM. The system will preserve all Mailserver settings even if none is selected. To reinstall a Mailserver RPM select one from the Mailserver Selection interface.

IPv6 Enabled

☒ IMAPD ☒ IMAPDSSL ☒ POP3D ☒ POP3DSSL

This option allows you to select the protocols that Courier will use to listen for IPv6 address requests.

Note: You must select a protocol in the Protocols Enabled section before you can select that protocol in the IPv6 Enabled section.

Maximum IMAP Connections (Total)

50

Maximum number of IMAP connections to accept.

Maximum IMAP Connections Per IP Address

30
